The Instruction To Update Interactive Screen APK

Preparation

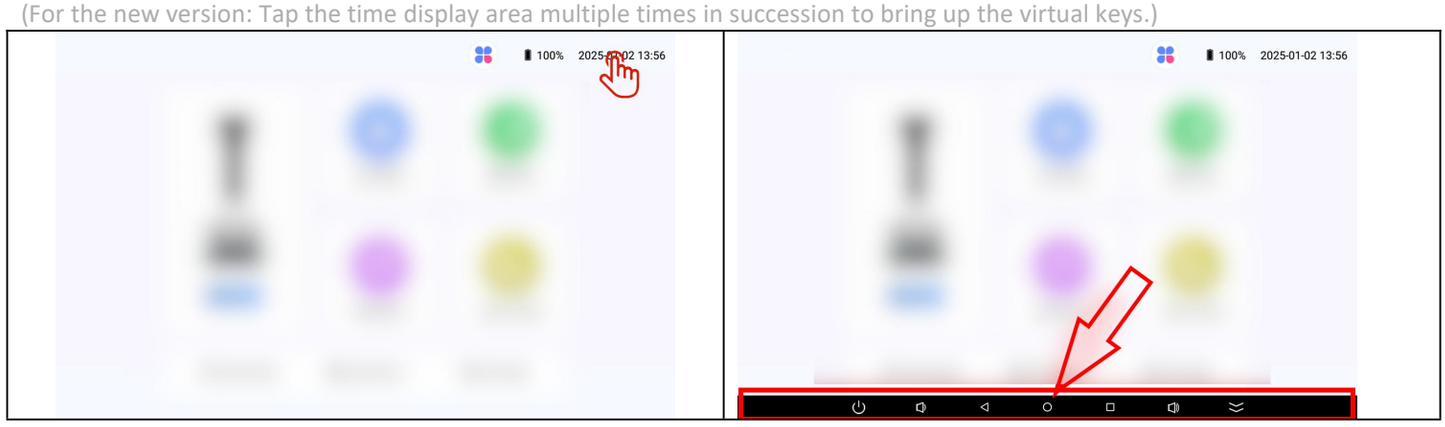
- APK file
- USB flash drive
- Robot to be updated

APK Update

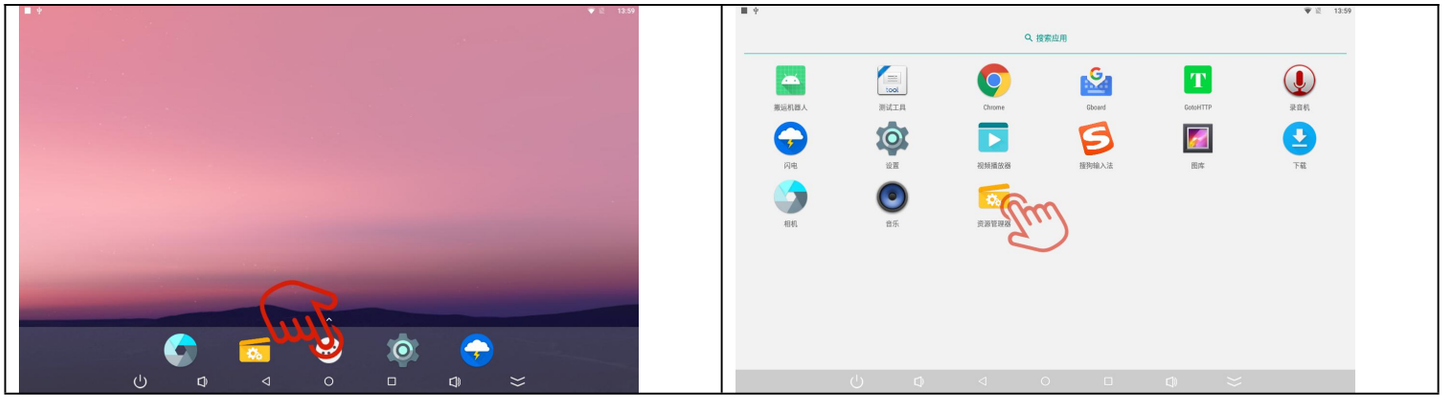
Note: Install the new APK as an overwrite directly. DO NOT uninstall the original APK before installing the new one.
Overwrite installation will retain the existing maps and tasks, whereas uninstalling the original APK first and then installing the new one will erase all local maps and tasks.

1. Save the APK file to the **USB flash drive** and insert the drive into the USB port on the side of the robot.

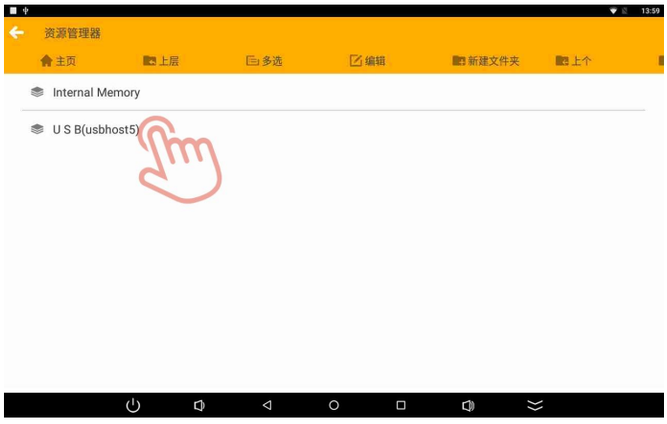
2. Press and hold the time display area on the home screen for 15 seconds, then the bottom of the screen will bring up the virtual keys. Tap the circle-shaped virtual key "**O**"to access the desktop.
(For the new version: Tap the time display area multiple times in succession to bring up the virtual keys.)



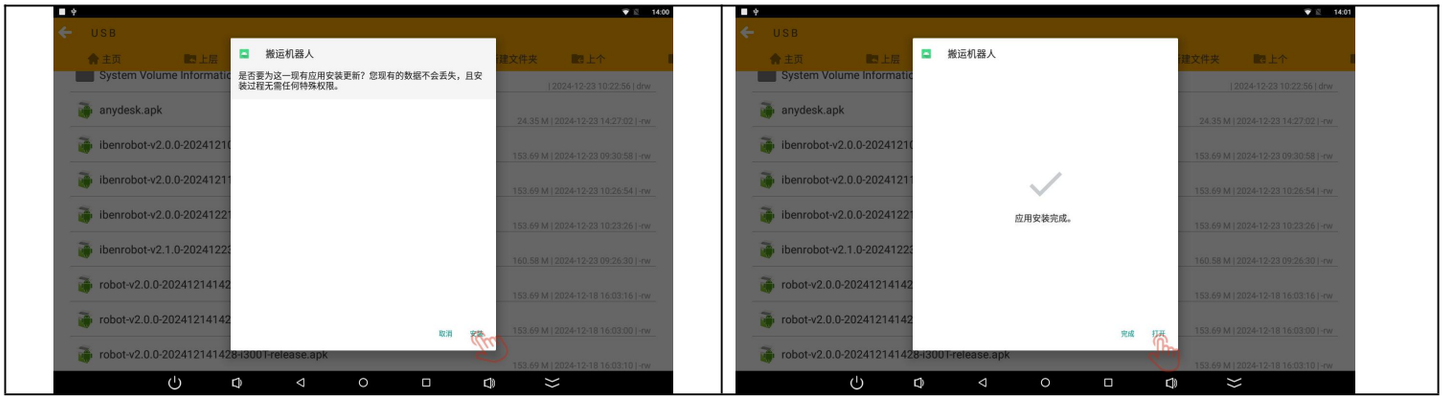
3. Tap the menu to enter the application list, then select **File Explorer**.



4. In the File Explorer, locate the **USB device** and select the prepared APK file for upgrade.



5. Click Installation(安装). After the installation is complete, tap Open(打开) to return to the home screen.



6. On the home screen, click More Settings. Navigate to Device Info > Software Version to check the version number and verify if the installation is successful.

> If the USB flash drive is not recognized, back up all files on the drive first, then try formatting the drive or replace it with another USB flash drive and retry the operation.
